Mumbai, Maharashtra - 401305, India

SUMMARY

Software Developer with 2+ years of experience building scalable backend systems and cloud-native applications on AWS, focusing on serverless and event-driven architectures, CI/CD automation, and system reliability. Proven track record of delivering end-to-end production systems, reducing deployment time by 40%, and improving performance by 30%. Strong experience in designing secure APIs and distributed systems.

EDUCATION

• University of Mumbai

Bachelor of Computer Engineering
◦ GPA: 9.06/10.00

July 2019 - May 2023
Mumbai, India

EXPERIENCE

• Quadzero

Software Developer

Jan 2024 - Present
Mumbai, India

- Led end-to-end backend development of a **multi-application platform** (Admin, Supervisor, User), enabling role-based workflows and hierarchical access control.
- Architected scalable **serverless infrastructure** on AWS (Lambda, API Gateway, DynamoDB), enabling event-driven processing using SQS, SNS, and Step Functions.
- Designed an event-driven pipeline using DynamoDB Streams, Lambda, and SQS to trigger APIs and handle failures via DLQs with email alerts.
- Improved system performance by **30%** through asynchronous processing, database optimization, and service decoupling.
- Engineered backend systems handling **high-throughput asynchronous workloads** using SQS and Lambda-based processing at scale.
- Developed secure **authentication and access control APIs** using JWT and IAM policies across distributed services.
- Built real-time notification systems integrating AWS SES and Firebase Cloud Messaging, enabling reliable event-driven communication.
- Led architectural decisions including service decoupling, event flow design, and scalability.

PROJECTS

• Serverless Event-Driven Notification System

[GitHub](#) | Tech: AWS Lambda, API Gateway, SQS, SES, Python, Boto3

- Developed a **serverless event-driven notification system** using AWS Lambda, SQS, and SES.
- Designed decoupled architecture using SQS for asynchronous processing and fault isolation.
- Implemented retry logic with Dead Letter Queues (DLQ) for failure handling.
- Enabled scalable event processing using Lambda concurrency.

• Scalable Serverless Backend for Multi-Role Application

[GitHub](#) | Tech: AWS Lambda, API Gateway, DynamoDB, SQS, AWS CDK, Python

- Architected a **serverless backend** supporting multi-role access control (RBAC).
- Developed authentication APIs using JWT-based token validation.
- Built event-driven workflows using SQS for asynchronous task processing.
- Engineered scalable backend services using Lambda and DynamoDB.

• Serverless TODO App with CI/CD

[GitHub](#) | Tools: Docker, Jenkins, AWS ECS

- Developed microservices-based TODO app using Node.js and React on AWS ECS.
- Automated deployments using CI/CD pipelines (GitHub + Jenkins).
- Integrated CloudWatch for logging and monitoring.

SKILLS

Languages: Python, JavaScript, SQL, C++

Backend: Node.js, Express.js, REST APIs

Cloud & DevOps: AWS (Lambda, API Gateway, DynamoDB, SQS, SNS, SES), Docker, Jenkins, GitHub Actions

Databases: DynamoDB, PostgreSQL, MongoDB

Architecture: Serverless, Event-Driven, Microservices, CI/CD

Tools: CloudWatch, Prometheus, Grafana, Postman, JIRA

CERTIFICATIONS

[AWS Cloud Technical Essentials](#) | [AWS DevOps Specialization](#) | [AWS APAC Solutions Architecture Simulation](#)
